

Business Requirements Document (BRD)

Project: Food Delivery App – Reorder Past Meal

Feature: Reorder

Prepared by: Anupoma Angasree Toma

1. Business Problem

Customers who want to purchase a previous meal again may need to search for the restaurant, find the same menu items, select options and rebuild their order. This creates unnecessary steps and increases the time required to place a repeat order.

2. Business Objective

Enable customers to quickly recreate a previous order from their order history while allowing them to review current prices, availability and order details before checkout.

3. Scope

In Scope

- View previous orders
- Select a previous order
- Reorder available items
- Display current prices
- Identify unavailable items
- Modify the recreated order
- Continue to checkout

Out of Scope

- Automatic recurring orders
- Restaurant-side menu management
- Loyalty/reward functionality
- Subscription management

4. Stakeholders

Stakeholder	Interest
Customer	Quickly reorder previous meals
Restaurant	Receive valid orders based on current menu
Product Manager	Improve customer experience and repeat purchases
Customer Support	Handle reorder-related customer issues

5. Current State AS-IS = how the process works currently.

- Customer wants same meal
- Opens Uber Eats
- Searches for restaurant
- Finds previous food items
- Selects items again
- Selects customisations
- Adds items to cart
- Reviews cart
- Checkout

Pain point: The customer has to repeat several steps even though they have ordered the same meal previously.

6. Future State TO-BE

- Customer wants same meal
- Opens Order History
- Selects Previous Order ↓
- Clicks Reorder ↓
- System checks availability ↓
- System applies current prices ↓
- Available items added to cart ↓
- Customer reviews changes ↓
- Checkout

7. Business Requirements

ID	Business Requirement
BR-01	The solution shall provide customers with a convenient method of initiating a repeat purchase from their previous orders.
BR-02	The solution shall ensure that a repeat order reflects current restaurant and item availability.
BR-03	The solution shall ensure that customers are presented with current pricing before confirming the order.
BR-04	The solution shall clearly inform customers when all or part of a previous order cannot be reordered.
BR-05	The solution shall allow customers to review and modify the recreated order before proceeding to checkout.
BR-06	The solution shall use the existing checkout process for final order confirmation and payment.

Stories with acceptance Criteria:

User Story 1 — View Previous Orders

As a customer, I want to view my previous orders so that I can find a meal I would like to order again.

Acceptance Criteria

- Given the customer is logged in, when they open Order History, then previous eligible orders are displayed.
- Each order displays the restaurant, order date, items and total.
- The customer can select a previous order to view its details.

User Story 2 — Reorder

As a customer, I want to reorder a previous meal so that I don't have to manually select the same items again.

Acceptance Criteria

- A Reorder option is available for eligible previous orders.
- Selecting Reorder recreates the available items from the previous order.
- The recreated order is displayed for review before checkout.

User Story 3 — Handle Unavailable Items

As a customer, I want to know when an item from my previous order is unavailable so that I can adjust my order before checkout.

Acceptance Criteria

- The system checks current item availability.
- Unavailable items are clearly identified.
- Unavailable items are not silently added to the order.
- The customer can continue with the remaining available items.

User Story 4 — Current Pricing

As a customer, I want to see the current prices of reordered items so that I know the correct amount I will be charged.

Acceptance Criteria

- Current menu prices are used when the order is recreated.

- The customer can see the updated total before checkout.
- Previous prices are not used as the amount to be charged.

User Story 5 — Modify Reordered Meal

As a customer, I want to modify my reordered meal so that I can change it before placing the order.

Acceptance Criteria

- Customer can change quantities.
- Customer can remove items.
- Customer can modify available item options where supported.
- The total updates when the order changes.
- Customer can proceed to checkout after reviewing the modified order.
